Introduction to energy methods. |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |  |  |
| Prerequisites MEC 201 Strength of Materials I                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |  |  |  |  |  |
| Textbooks                                                                                                                                                                                                                                                                                                                         | <b>Primary</b> Ferdinand P. Beer et.al., Mechanics of Materials, McGraw-Hill, 6th Ed., 2012. <b>Supplementary</b> Hibbeler, R. C., Mechanics of Materials, 9th ed., Prentice Hall, Pearson, 2013.                                                                                                                                                                                                                                                                                                                                                                                                              |  |  |  |  |  |
| Objectives                                                                                                                                                                                                                                                                                                                        | <ul> <li>To analyze and understand principal stresses due to the combination of two-dimensiona stresses on an element and failure mechanisms in materials.</li> <li>To calculate displacement of beams using different methods.</li> <li>To understand buckling theory for columns.</li> <li>To learn fundamental concepts for energy methods.</li> </ul>                                                                                                                                                                                                                                                      |  |  |  |  |  |
| Course Outcomes                                                                                                                                                                                                                                                                                                                   | In this course you will be able to: CO1 Recognize physical phenomenon in the context of strength of materials CO2 Demonstrate an understanding of the structural mechanics theory for deformable bodies. CO3 Apply structural mechanics of deformable bodies to solve engineering problems. CO4 Demonstrate an understanding of the relationships between loads, member forces and deformations and material stresses and strains. CO5 Demonstrate an understanding of the assumptions and limitations of the structural mechanics theory. CO6 Competence in problem identification, formulation and solution. |  |  |  |  |  |

# Weekly Schedule of Topics

| W  | Topic                                                                                             |
|----|---------------------------------------------------------------------------------------------------|
| 1  | Stresses under Combined Loadings.                                                                 |
| 2  | Design of Transmission Shafts.                                                                    |
| 3  | Deflection of Beams by Integration, Equation of the Elastic Curve, Boundary Conditions for Beams. |
| 4  | Solution of the Second-Order Moment Equation.                                                     |
| 5  | Direct Determination of the Elastic Curve from Load Distribution.                                 |
| 6  | Analysis of Statically Indeterminate Beams.                                                       |
| 7  | Using Singularity Functions to Determine the Slope and Deflection of a Beam.                      |
| 8  | Method of Superposition and Its Application to Statically Indeterminate Beams.                    |
| 9  | Columns. Euler's Formula for Pin-Ended Columns. Extension of Euler's Formula.                     |
| 10 | Design of Columns under a Centric Load. Johnson's Formula for Steel Columns.                      |
|    |                                                                                                   |

| 11 | Energy Methods.                                             |
|----|-------------------------------------------------------------|
| 12 | Work and Energy under a Single Load.                        |
| 13 | An Important Application: Impact Loading.                   |
| 14 | Work and Energy under Several Loads. Castigliano's Theorem. |

| <b>Professional</b> |
|---------------------|
| Contribution        |

Ability to calculate stress and strain under various conditions

## **Contribution to Program Outcomes\***
