Prerequisites	NA
Textbooks	<u>Primary</u> Physics for Scientists and Engineers, Authors: R.A. Serway and J.W. Jewett. <u>Supplementary</u> Fundamentals of Physics Extended, Authors: D. Halliday & R. Resnick, J. Walker.
Objectives	<ul style="list-style-type: none"> • To learn the basic concepts and laws of electricity and magnetism. • To be able to calculate the electric and magnetic fields for some simple charge and current configurations using these basic laws. • To understand how charges are affected by electric and/or magnetic fields. • To gain the ability to understand and use Maxwell's equations that connect the events related to electricity and magnetism.
Course Outcomes	In this course you will be able to: CO1 Explain interactions between stationary charges. CO2 Explain the concepts of electric field and electric potential. CO3 Perform electrical circuit analysis. CO4 Explain direct current, alternating current and related laws. CO5 Explain the concepts of magnetic field and magnetic flux.
